Please visit this link to see all of my Test Cases.

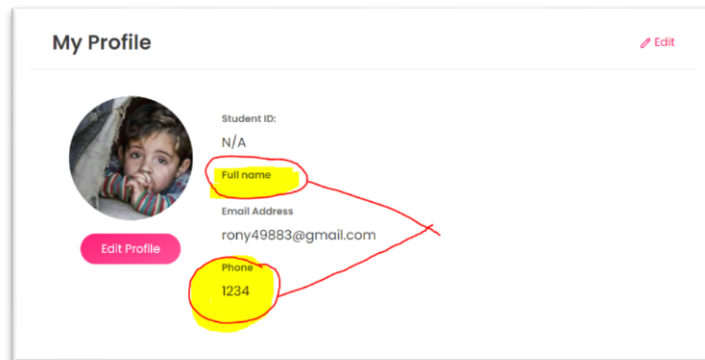

Some of my opinions to improve the Website:

While testing this website I was found some critical bugs as well as some minor bugs. I think, immediately we have to fix up all the critical and major bugs so that in the future there will be no impact on this website. Again before adding more feature we obviously need to properly test them with Software Testers.

Top 3 Critical and major bugs which I found are,

1. In the profile edit section it accepts only spaces and special characters as a full name input data!
2. Again for mobile number it accepts invalid mobile number!

3. At the video playing time if the internet connection will suddenly disconnect and if restored the connection then error message should not be displayed continue. But the video was interrupted with showing error message which is really disturbing. Again if someone refresh the page then the video is automatically play from the 0 position.

I am very much interested to perform and execute API Testing, Database Testing, Security Testing, Performance Testing and many more testing for Programming Hero products if I will get the chance.

Thanks and Regards
